**Green Generation Solutions, LLC
Awarded GSA Schedule 84 Contract**

Bethesda, Maryland | March 1, 2014

Green Generation Solutions is pleased to announce that it has been awarded a five-year Schedule 84 contract by the U.S. General Services Administration (GSA), the procurement arm of the federal government. The five-year contract allows for Federal customers to utilize GreenGen's energy efficiency solutions services, enabling government agencies to obtain auditing, design, engineering, and implementation services at approved pricing and with license terms from a trusted vendor.

The GSA Schedule 84 award is the culmination of a rigorous process in which the GSA carefully evaluates companies to determine their proficiency and suitability for providing products and/or services to the federal government. The assessment covers an array of a corporation's capabilities, including organizational structure, performance history, customer satisfaction, and other criteria.

In awarding GreenGen a GSA Schedule 84 contract, the federal government has determined that GreenGen is recognized as a preferred vendor that is fully authorized to conduct business directly with federal government agencies.

Federal facilities with buildings fewer than 200,000 square feet may contract with GreenGen to meet energy savings goals in buildings that traditionally get left behind due to their smaller size. Because the retrofits pay for themselves, federal agencies can implement them without using appropriated funds. GreenGen's GSA Schedule 84 contract provides a standardized and streamlined process to award and construct projects quickly. The program targets straightforward energy conservation measures (ECMs), including lighting, HVAC controls and equipment replacement, building envelope, onsite power generation, water, and it includes basic levels of measurement and verification (M&V) for each ECM.

In an effort to further their services to the federal government efficiently, GreenGen was awarded a listing on the US Department of Energy's (DOE) Qualified Energy Services Company listing in July 2013. A DOE appointed Qualification Review Board evaluates applications on the merits of past performance, ability to finance energy services contracts, actual energy savings of past projects and other metrics. Inclusion into this well recognized group of energy services companies means that GreenGen may compete for advertised federal Energy Savings Performance Contracts. The Energy Policy Act of 1992 (EPAct) directed the DOE to develop methods and procedures to bring energy savings performance contracts into the mainstream of federal procurement.

In the past 18 months, GreenGen has implemented energy efficiency solutions for several secure U.S. government facilities that lowered operating costs on behalf of the federal government. These solutions have included including lighting, HVAC controls and equipment replacement, building envelope, onsite power generation, water, and data visualization intended to create sustained behavioral change.

"GreenGen is very pleased to make its services available through the GSA," said Brad Dockser, CEO of GreenGen. "By reducing the procurement challenge, our GSA Schedule 84 contract helps GreenGen and prospective government clients focus on what matters most – effectively assessing and resolving critical energy efficiency challenges." Mr Dockser concludes, "We help government agencies solve their biggest problems by customizing and implementing energy-saving solutions to better meet their needs. Several agencies have yet to take advantage of our full offering. GreenGen seeks to provide needed services for all government agencies."

Federal, state, and local agencies can obtain information about GreenGen's GSA Schedule 84 contract services on the GSA Advantage web site: www.gsaadvantage.gov (search for Contract Number: GS-07F-143BA) or by contacting GreenGen directly at 301.202.2930. GreenGen offers its services under the Special Item Numbers (SIN) 246-52 – Professional Security/Facility Management Services and 246-53 – Facility Management and Energy Solutions. The award is effective March 1, 2014 to February 28, 2019 and allows for three five-year extension options.

###

ABOUT GREEN GENERATION SOLUTIONS, LLC

Green Generation Solutions, LLC, based in Bethesda, Maryland, is an international firm that optimizes building profitability by engineering and implementing comprehensive, integrated energy efficiency solutions that lower operating costs while improving sustainability. Clients include governments, real estate opportunity funds, private equity firms, and REITs.

The company believes that every business can be more profitable by making energy decisions backed by comprehensive analysis, collaborative planning, and ongoing measurement of results. Our customized energy solutions are engineered and implemented using proven and disruptive technologies with the purpose of lowering operating costs and Increasing the efficiency of our clients' facilities, while improving their overall corporate sustainability. We believe data should drive decisions and sustained behavioral change will ensure success.
