Green Generation Solutions Expands to Europe; Forms Partnership with UK's BRE to Support Growing Energy Efficiency Practice

BETHESDA, MD (February 10, 2015) —[Green Generation Solutions](#) (GreenGen), a Washington DC-based company experienced in engineering and implementing energy efficiency plans in commercial properties, has opened an office in the UK and formed an alliance with London-based [BRE](#), a leading consultancy offering expertise in the built environment, to support its global growth. GreenGen and BRE's combined energy and built environment expertise will help property owners and managers realize energy savings and boost the value of their assets.

"We have a tried and tested method for assessing and implementing energy efficiency solutions that provides real economic benefit and improved profitability to our clients and their assets. With our new UK office and partnership with BRE, we are well positioned to continue growing our business in Europe and delivering outstanding results to our clients," said GreenGen CEO Brad Dockser.

Head of BRE's Building Futures Group Simon Cross said: "We have a critical need in the UK to drive down operating costs and reduce risk for aging property portfolios so owners and managers of built assets can improve building performance and their energy performance certificate ratings. We look forward to working with Green Generation Solutions to improve building stock across the country and the EU."

Initially BRE will carry out independent energy audits on buildings identifying quick win and long-term improvements that can be implemented. With a strong focus on delivering measurable commercial benefits, GreenGen will then provide cost and return data to clients based on the BRE recommended retrofit actions and manage the delivery of work for the clients.

Solutions will include improvements to the building envelope, mechanical systems, controls, and lighting. Additional areas of focus include policies, procedures, and occupant behavior. The alliance is timely since EU legislation soon takes effect that will make it unlawful to rent out a business that has less than an E energy efficiency rating.

About Green Generation Solutions, LLC

Green Generation Solutions (GreenGen) is a global energy services provider that engineers and implements energy efficiency solutions to lower buildings' operating costs while improving sustainability. www.greengenerationsolutions.com

About the BRE Group

BRE is a world leading building science centre that generates new knowledge through research. This is used to create products, tools and standards that drive positive change across the built environment. BRE helps its government and private sector clients meet the significant environmental, social and economic challenges they faces in delivering homes, buildings and communities.

BRE is owned by the BRE Trust, a registered charity. The Trust uses the profits made by the BRE companies to fund research and education that advances knowledge of the built environment. www.bre.co.uk
